This component will rewrite your Joomla! URLs not to be only Search Engine Friendly, but also to be human easily understandable. Provides support for multilingual sites using JoomFish. Enables full customization of wide-range of meta tags for any URL in your site! Works with both with Apache and IIS. May be easily updated on-line. Allows you to configure your 404 page.

**IMPORTANT!** Version 2.2.2 includes several critical fixes. All users are advised to upgrade as soon as possible.

**NEW!** Version 2.0 is out! Use the new features to better prevent duplicates and cache your URLs to decrease DB load!

Further this component offers API for adding SEF functionality for other 3rd party Joomla! modules easily. Current release includes support for following 3rd party components: JoomFish, AlphaContent, DocMan, Glossary, Hot Property, Jomres, Joomlaboard, SMF Bridge, VirtueMart, Mosets Tree, ReMOSitory. Multi-language interface support is included.

Note: As of February 7, 2008, ARTIO JoomSEF is only available for Joomla! 1.X
